

Strategy E: Period-by-period anatomy of raw vs corrected moments (single run, T = 400)

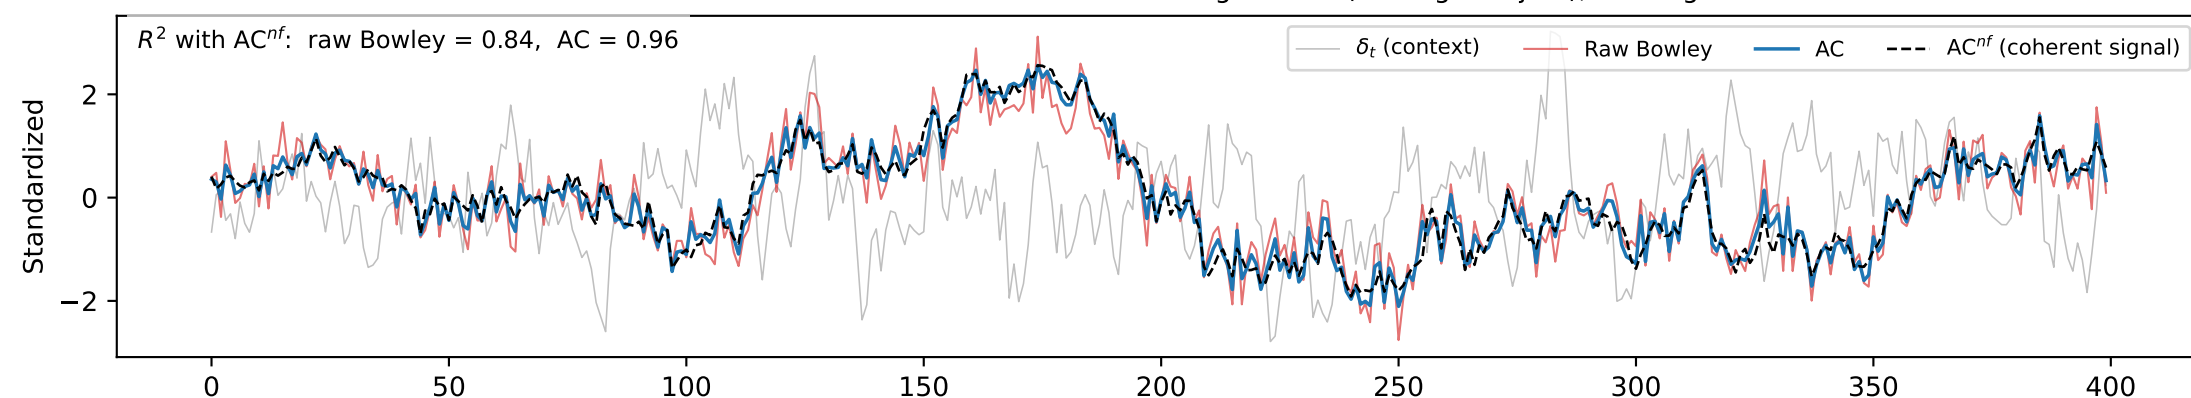

Panel A: First moment (levels) — artifact episodes shaded

Panel B: Second moment — in shaded episodes the structural component moves while u_t is stable; raw IU spikes, NU does not

Panel C: Third moment — AC tracks the noise-free coherent signal AC^{nf} (its target object), filtering incoherent noise

Panel D: Exact decomposition of raw $IU_t = S_t + u_t + I_t$ — structural (artifact) vs genuine vs idiosyncratic
